

GROUT LANCES

Grout Lances:

- Provides quick attachment to Megabolt
- Grouting can be performed from the floor – no working from ladders
- Swivel reduces the need to disconnect the grout hose from the lance
- Eliminates the need to attach grout tubes to the Megabolt
- Add a ball valve to the lance and the operator can stall the pump when changing the lance.
- Add a “3” way and another lance and one lance can be changed while the other is pumping
- Large pressure relief hole in head stops grout spurting when lance is released.
